

June 28, 2011 RESERVOIR LEVEL AND FLOW UPDATE

Storage in Elephant Butte/Caballo is still declining, and we are now well past the period during which filling occurred in the previous two years. Storage is down over 260,000 ac-ft compared to this date last year. Rio Grande flow at San Marcial is very low, and since March 1 has totaled about 100,000 ac-ft. Release from Caballo during the same period has totaled almost 250,000 ac-ft, resulting in a shortfall between inflow and release of 150,000 ac-ft.

COMBINED STORAGE Elephant Butte and Caballo June 27, 2011 333,116 acre-feet
